

Practice Analytics

The ability to assess and analyze the state of your practice is just the tool you need to support and grow your business. Practice Analytics is an easy-to-use report writing and business intelligence tool that can be utilized by executives, managers, providers and support staff. Analyze detail and summary data, generate ad-hoc reports and presentation graphics, and produce data files for export to other applications.

Intelligence Across the Continuum of Care

Predefined data views eliminate the need to understand the database structure, and ad-hoc reports can be run without programming knowledge. Data from the practice management system is downloaded nightly into the SQL database providing the practice with an updated database to query the following day. Users can run standard and ad-hoc reports on data fields in every area from financials to clinical outcomes such as diagnoses, labs, prescriptions and encounter findings.*

Unparalleled Flexibility and Scalability

Practice Analytics is a perfect solution for practices of all types and sizes. From single-provider primary care

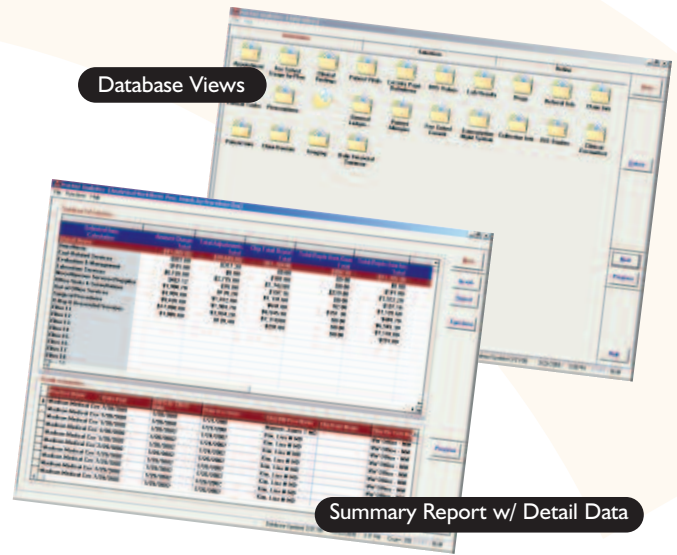

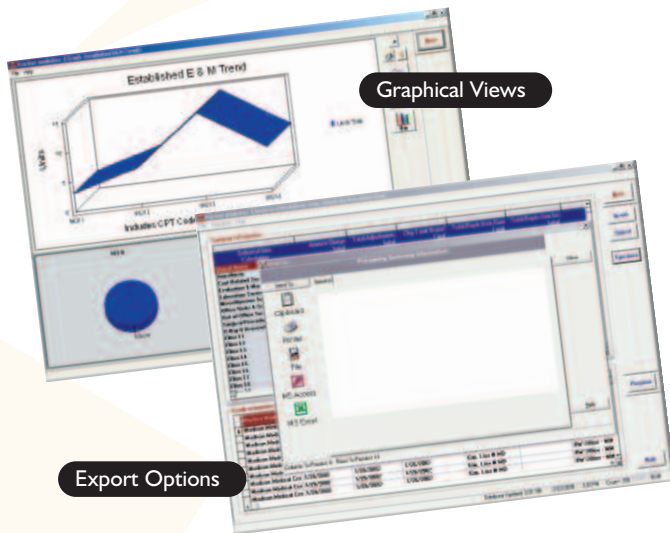

to community health networks, the dynamic system expands to meet your needs at any level. It was developed from the ground up so that users of all skill levels could quickly learn to use the system and implement it into their workflow. As a standalone solution it uses a separate database from your practice management system so that complex reporting won't slow down daily operations.

Producing Quality Outcomes

The system enables highly integrated reporting on demographic, financial and clinical data. Use any of the more than 200 reports or create your own using simple user-defined fields. In addition, Practice Analytics lets users determine how they want to view data. Choose from a variety of output styles available in the system including worksheets, graphical views, and traditional report styles, or simply export to Microsoft® Excel®, Access®, and other programs.

Practice Analytics

CHALLENGE	FEATURE	BENEFIT
Quickly running basic daily, monthly, quarterly and other reports	Practice Analytics standard reports	Over 200 standard reports exist for administrative, financial and clinical reporting, all of which can be run in seconds
Creating customized reports	Practice Analytics ad-hoc reports	Easily create, run and save reports on any field in the system without any programming knowledge
Reporting on fields that are not already in the system	User-defined field creation	Add customized fields to the system and create reports using those fields
Learning to use a system with ad-hoc features	Graphical user interface (GUI) design	The GUI design makes the system intuitive and easy to learn even when building ad-hoc reports
Changing the format of reports	Formatting and Exporting Capabilities	Format reports in Practice Analytics to show them as charts and graphs or export them to programs like Microsoft® Excel to create spreadsheets and other formats
Tracking clinical outcomes for research, Pay-for-Performance and other needs	Clinical Reporting	Run standard and ad-hoc reports on data fields in Intergy® EHR such as diagnoses, labs, prescriptions and encounter findings
Accessing the most up-to-date data from the practice management system	SQL Database	Data from the practice management system is downloaded nightly into the SQL database to be accessed the next day
Ensuring data entry is accurate across systems	Data Entry Audits	To help ensure that data is being entered accurately in the practice management system, Practice Analytics enables data entry audits to identify and trace errors
Enabling multiple users to access the system at the same time	Scalable system architecture	Supports standalone, centralized, and distributed data environments where multiple users can work in the system simultaneously
